**Modern Thermodynamics: From Heat Engines to Dissipative Structures** Dilip Kondepudi, Ilya Prigogine

Thermodynamics is a core part of most science and engineering curricula. However, most texts that are currently available to students still treat thermodynamics very much as it was presented in the 19th century, generally for historical rather than pedagogical reasons. Modern Thermodynamics takes a different approach, and deals with the relationship between irreversible processes and entropy. The relationship between irreversible processes and entropy is introduced early on, enabling the reader to benefit from seeing the relationship in such processes as heat conduction and chemical reactions. This text presents thermodynamics in a contemporary and exciting manner, with a wide range of applications, and many exercises and examples. Students are also encouraged to use computers through the provision of Mathematica code and Internet / WWW addresses where real data and additional information can be found. FEATURES A truly modern approach to thermodynamics, presenting it as a science of irreversible processes whilst avoiding dividing the subject into equilibrium and non-equilibrium thermodynamics. An extensive range of applications drawn from science and engineering, along with many real world examples, and exercises. Written by two well-known authors, of whom Professor Ilya Prigogine was awarded the Nobel Prize for his research into thermodynamics. CONTENTS: Part I: Historical Roots: From Heat Engines to Cosmology: Basic Concepts; First Law of Thermodynamics; Second Law of Thermodynamics and the Arrow of Time; Entropy in the Realm of Chemical Reactions; Part II: Equilibrium Thermodynamics: Extremum Principles and General Thermodynamic Relations; Basic Thermodynamics of Gases, Liquids and Solids; Thermodynamics of Phase Change; Thermodynamics of Solutions; Thermodynamics of Chemical Transformations; Fields and Internal Degrees of Freedom; Thermodynamics of Radiation; Part III: Fluctuations and Stability: The Gibbs' Theory of Stability; Critical Phenomena and Configurational Heat Capacity; Theory of Stability and Fluctuations Based on Entropy Production; Part IV: Linear Nonequilibrium Thermodynamics: Nonequilibrium Thermodynamics: The Foundations; Nonequilibrium Thermodynamics: The Linear Regime; Nonequilibrium Stationary States and their Stability: Linear Regime; Part V: Order Through Fluctuations: Nonlinear Thermodynamics; Dissipative Structures; Postface: Where do we go from here?

### **From reader reviews:**

#### **Teressa Fernandez:**

Information is provisions for anyone to get better life, information nowadays can get by anyone at everywhere. The information can be a know-how or any news even a problem. What people must be consider when those information which is inside former life are difficult to be find than now could be taking seriously which one would work to believe or which one typically the resource are convinced. If you receive the unstable resource then you obtain it as your main information it will have huge disadvantage for you. All those possibilities will not happen in you if you take Modern Thermodynamics: From Heat Engines to Dissipative Structures as the daily resource information.

#### **Melissa Jackson:**

Playing with family in the park, coming to see the marine world or hanging out with buddies is thing that usually you have done when you have spare time, and then why you don't try thing that really opposite from that. A single activity that make you not sense tired but still relaxing, trilling like on roller coaster you are ride on and with addition details. Even you love Modern Thermodynamics: From Heat Engines to Dissipative Structures, you could enjoy both. It is good combination right, you still want to miss it? What kind of hangout type is it? Oh can occur its mind hangout people. What? Still don't get it, oh come on its named reading friends.

#### **Matthew German:**

That reserve can make you to feel relax. This book Modern Thermodynamics: From Heat Engines to Dissipative Structures was colorful and of course has pictures on there. As we know that book Modern Thermodynamics: From Heat Engines to Dissipative Structures has many kinds or category. Start from kids until young adults. For example Naruto or Detective Conan you can read and believe that you are the character on there. So , not at all of book tend to be make you bored, any it offers up you feel happy, fun and loosen up. Try to choose the best book for you personally and try to like reading that.

#### **Jose Roberts:**

As a pupil exactly feel bored to reading. If their teacher inquired them to go to the library as well as to make summary for some book, they are complained. Just tiny students that has reading's heart and soul or real their leisure activity. They just do what the professor want, like asked to the library. They go to presently there but nothing reading seriously. Any students feel that studying is not important, boring as well as can't see colorful photos on there. Yeah, it is to become complicated. Book is very important in your case. As we know that on this age, many ways to get whatever we really wish for. Likewise word says, many ways to reach Chinese's country. Therefore , this Modern Thermodynamics: From Heat Engines to Dissipative Structures can make you sense more interested to read.
