## Toxicology of the Nose and Upper Airways (Target Organ Toxicology Series)

The application of molecular biologic methods, recognition of neurogenic inflammatory processes, and utilization of genetic knockout animals are just some of the advances in toxicology of the upper airways in recent years. **Toxicology of the Nose and Upper Airways** presents a culmination of knowledge gained as a result of both human and experimental animal studies over the past decade. With contributions from internationally recognized leaders in the fields of experimental toxicology, respiratory medicine, otolaryngology, allergy, and sensory science, this volume:

- Examines the effect of selected pollutants on the upper airways of both humans and experimental animals—emphasizing mechanistic issues in the process
- Discusses epidemiologic findings from populations exposed occupationally or environmentally, comparing and contrasting alternative risk assessment approaches
- Features clear chapter organization with sections on structure and function, dosimetry and toxicokinetics, functional and pathologic responses and their measurement, responses to specific agents, risk assessment, and special topics

This volume is an essential reference for pharmacologists and toxicologists concerned with the nose and upper airway, as well as clinicians, risk assessors, and sensory scientists.
