Gold and Silver Staining: Techniques in Molecular Morphology (Advances in Pathology, Microscopy, & Molecular Morphology)

Gold and Silver Staining: Techniques in Molecular Morphology (Advances in Pathology, Microscopy, & Molecular Morphology)

Immunogold silver staining is one of the most sensitive techniques available for visualizing the location of antibodies and nucleotide probes that have been bounded to specific antigens or to nucleotide sequences. As gold and silver staining continues to advance research in molecular morphology, this book presents the information you need to know about the various staining methods, their useful applications, and the advantages and drawbacks of each process.

Gold and Silver Staining: Techniques in Molecular Morphology provides a timely description of approaches, methods, protocols, and applications. The contributors cover the latest developments and a wide range of applications from highly sensitive detection of antigens to single copy detection of DNA and RNA. Some of the authors are "living legends" in the field and bring their expertise and experience to this fine collaboration. Written in one consistent style, each chapter includes a concise, but comprehensive introduction, step-by-step protocols with technical hints, and a discussion of results and critical steps.

What differentiates this book from all others like it, is the status of the editors, who have worked on this technique from its inception and have produced innumerable publications on the topic. The other distinguishing feature is that all of the contributors are amongst the absolute foremost leaders from the United States and Europe. Gold and Silver Staining: Techniques in Molecular Morphology presents a complete overview and detailed descriptions of this technique that allows the visualization of molecules that have never been localized before and with hitherto unknown sensitivity. Not only does this book provide an excellent review of this field, but it also serves as a lab manual for those who want to carry out this technique in their laboratory and clinical work. Armed with this information, advances in this powerful field of research will ensue.

From reader reviews:

Natalie White:

Book is to be different per grade. Book for children until finally adult are different content. As we know that book is very important for us. The book Gold and Silver Staining: Techniques in Molecular Morphology (Advances in Pathology, Microscopy, & Molecular Morphology) was making you to know about other expertise and of course you can take more information. It doesn't matter what advantages for you. The guide Gold and Silver Staining: Techniques in Molecular Morphology (Advances in Pathology, Microscopy, & Molecular Morphology) is not only giving you more new information but also for being your friend when you experience bored. You can spend your current spend time to read your book. Try to make relationship using the book Gold and Silver Staining: Techniques in Molecular Morphology (Advances in Pathology, Microscopy, & Molecular Morphology). You never sense lose out for everything if you read some books.

Jere Araujo:

The reason why? Because this Gold and Silver Staining: Techniques in Molecular Morphology (Advances in Pathology, Microscopy, & Molecular Morphology) is an unordinary book that the inside of the publication waiting for you to snap that but latter it will jolt you with the secret the idea inside. Reading this book next to it was fantastic author who also write the book in such incredible way makes the content interior easier to understand, entertaining means but still convey the meaning thoroughly. So , it is good for you for not hesitating having this nowadays or you going to regret it. This amazing book will give you a lot of gains than the other book get such as help improving your skill and your critical thinking way. So , still want to hold off having that book? If I had been you I will go to the guide store hurriedly.

Lois Hutter:

This Gold and Silver Staining: Techniques in Molecular Morphology (Advances in Pathology, Microscopy, & Molecular Morphology) is great guide for you because the content and that is full of information for you who always deal with world and also have to make decision every minute. That book reveal it data accurately using great arrange word or we can claim no rambling sentences within it. So if you are read that hurriedly you can have whole details in it. Doesn't mean it only provides straight forward sentences but difficult core information with splendid delivering sentences. Having Gold and Silver Staining: Techniques in Molecular Morphology (Advances in Pathology, Microscopy, & Molecular Morphology) in your hand like keeping the world in your arm, data in it is not ridiculous one. We can say that no publication that offer you world throughout ten or fifteen minute right but this guide already do that. So , this can be good reading book. Hi Mr. and Mrs. active do you still doubt this?

Michael Barth:

As a college student exactly feel bored for you to reading. If their teacher asked them to go to the library or even make summary for some reserve, they are complained. Just minor students that has reading's internal or

real their passion. They just do what the teacher want, like asked to the library. They go to right now there but nothing reading very seriously. Any students feel that reading through is not important, boring in addition to can't see colorful photographs on there. Yeah, it is being complicated. Book is very important in your case. As we know that on this age, many ways to get whatever you want. Likewise word says, ways to reach Chinese's country. So , this Gold and Silver Staining: Techniques in Molecular Morphology (Advances in Pathology, Microscopy, & Molecular Morphology) can make you truly feel more interested to read.
