Device Architecture and Materials for Organic Light-Emitting Devices: Targeting High Current Densities and Control of the Triplet Concentration Sarah Schols

Device Architecture and Materials for Organic Light-Emitting Devices focuses on the design of new device and material concepts for organic light-emitting devices, thereby targeting high current densities and an improved control of the triplet concentration. A new light-emitting device architecture, the OLED with field-effect electron transport, is demonstrated. This device is a hybrid between a diode and a field-effect transistor. Compared to conventional OLEDs, the metallic cathode is displaced by one to several micrometers from the light-emitting zone, reducing optical absorption losses. The electrons injected by the cathode accumulate at an organic heterojunction and are transported to the light-emission zone by field-effect. High mobilities for charge carriers are achieved in this way, enabling a high current density and a reduced number of charge carriers in the device. Pulsed excitation experiments show that pulses down to 1 μ s can be applied to this structure without affecting the light intensity, suggesting that pulsed excitation might be useful to reduce the accumulation of triplets in the device. The combination of all these properties makes the OLED with field-effect electron transport particularly interesting for waveguide devices and future electrically pumped lasers. In addition, triplet-emitter doped organic materials, as well as the use of triplet scavengers in conjugated polymers are investigated.

From reader reviews:

Patricia Briggs:

Nowadays reading books be than want or need but also work as a life style. This reading habit give you lot of advantages. The benefits you got of course the knowledge your information inside the book which improve your knowledge and information. The details you get based on what kind of e-book you read, if you want have more knowledge just go with training books but if you want really feel happy read one having theme for entertaining for example comic or novel. Often the Device Architecture and Materials for Organic Light-Emitting Devices: Targeting High Current Densities and Control of the Triplet Concentration is kind of e-book which is giving the reader capricious experience.

Irene Carpenter:

This Device Architecture and Materials for Organic Light-Emitting Devices: Targeting High Current Densities and Control of the Triplet Concentration is great e-book for you because the content which is full of information for you who all always deal with world and get to make decision every minute. This kind of book reveal it info accurately using great coordinate word or we can state no rambling sentences included. So if you are read the item hurriedly you can have whole details in it. Doesn't mean it only offers you straight forward sentences but tough core information with lovely delivering sentences. Having Device Architecture and Materials for Organic Light-Emitting Devices: Targeting High Current Densities and Control of the Triplet Concentration in your hand like having the world in your arm, details in it is not ridiculous a single. We can say that no reserve that offer you world inside ten or fifteen minute right but this e-book already do that. So , this really is good reading book. Heya Mr. and Mrs. stressful do you still doubt that?

June Ortiz:

This Device Architecture and Materials for Organic Light-Emitting Devices: Targeting High Current Densities and Control of the Triplet Concentration is completely new way for you who has attention to look for some information given it relief your hunger info. Getting deeper you upon it getting knowledge more you know otherwise you who still having little digest in reading this Device Architecture and Materials for Organic Light-Emitting Devices: Targeting High Current Densities and Control of the Triplet Concentration can be the light food for you because the information inside this specific book is easy to get by simply anyone. These books produce itself in the form that is reachable by anyone, yeah I mean in the e-book application form. People who think that in publication form make them feel drowsy even dizzy this reserve is the answer. So there is no in reading a reserve especially this one. You can find what you are looking for. It should be here for an individual. So , don't miss the idea! Just read this e-book style for your better life and knowledge.

Ann Amos:

As we know that book is significant thing to add our know-how for everything. By a book we can know

everything we would like. A book is a list of written, printed, illustrated as well as blank sheet. Every year seemed to be exactly added. This publication Device Architecture and Materials for Organic Light-Emitting Devices: Targeting High Current Densities and Control of the Triplet Concentration was filled with regards to science. Spend your time to add your knowledge about your research competence. Some people has diverse feel when they reading a new book. If you know how big good thing about a book, you can truly feel enjoy to read a e-book. In the modern era like today, many ways to get book that you wanted.
