Neuropsychological and Behavioral Aspects of Diabetes (Contributions to Psychology and Medicine)

Neuropsychological and Behavioral Aspects of Diabetes (Contributions to Psychology and Medicine)

Behavioral medicine has blossomed as an area of systematic investigation during the past 10-20 years. Throughout its steady growth, there have been increasing interest and specialization in the study of neuropsychological and behavioral aspects of diabetes. This book attempts to capture and report exciting new developments in the study of both insulin-dependent (Type I) and non-insulin-dependent (Type II) diabetes mellitus. Accordingly, it is divided into two major sections. Physiological aspects of each disease, which differ significantly in pathophysiology and course, are discussed in separate medical overviews that introduce each major section. These overviews are written by Drs. Tsalikian and Zimmerman, leading medical researchers in insulin and non-insulin-dependent diabetes, respectively. Each section also contains chapters describing neuropsychological and cognitive disease correlates, psychosocial patterns of adjustment, and treatment adherence issues. Psychological aspects of insulin-dependent diabetes have been studied more extensively than non-insulin-dependent diabetes, perhaps because it is more often associated with graver medical complications. Therefore, there is a larger body of research to review and the first section has been divided into chapters on cognitive disease sequelae in populations of children and adults, separately. In his chapter, Dr. Ryan discusses developmental factors related to the unique sensitivity of the brain to metabolic derangement. Dr. Holmes reviews studies of adults with diabetes and the cognitive correlates of both acute and chronic blood glucose disruption. Developmental disease issues are further covered in Dr.
