Sociality, Hierarchy, Health: Comparative Biodemography is a collection of papers that examine cross-species comparisons of social environments with a focus on social behaviors along with social hierarchies and connections, to examine their effects on health, longevity, and life histories. This report covers a broad spectrum of nonhuman animals, exploring a variety of measures of position in social hierarchies and social networks, drawing links among these factors to health outcomes and trajectories, and comparing them to those in humans. *Sociality, Hierarchy, Health* revisits both the theoretical underpinnings of biodemography and the empirical findings that have emerged over the past two decades.
